Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Lilia George provides word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, Agriculture and Trade Analysis Systems Branch, Data Services Center.

Digest

U.S. Shipments to Most Customers Rise in FY 1992 (see p. 2). U.S. agricultural exports rose \$4.3 billion during the first 11 months of FY 1992, as the value of exports rose for virtually every commodity and customer. The value of U.S. agricultural exports rose 12 percent to \$39 billion during October 1991-August 1992, with cotton the only major commodity with lower exports and Eastern Europe the only export market taking significantly less.

October-August Imports Ahead of Last Year (see p. 6). Agricultural imports during October 1991-August 1992 reached almost \$22.4 billion, 8 percent above last year's level. With a month remaining in the fiscal year, imports have nearly reached last year's record of \$22.6 billion. Noncompetitive agricultural imports (mostly bananas, cocoa, and coffee) were 7 percent above the same period last year, and competitive imports (mostly tobacco and grains and feeds) were up 8 percent.

Import Share of Consumption in 1990 (see p. 7). The import share of consumption varies greatly depending on the type of commodity and U.S. domestic production levels. The import share of consumption for noncompetitive imports (tropical commodities not grown in the United States in any significant volume) such as bananas, coffee, or tea is at or near 100 percent. Other commodities such as dairy for which the U.S. industry easily supplied almost all consumption needs, showed a very small import share.

U.S. Agricultural Trade Boosts Overall Economy (see p. 11). U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1991 stimulated another \$1.40 (an additional \$54.7 billion overall) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 860,000 full-time civilian jobs, including 545,000 jobs in the nonfarm sector.

U.S. Shipments to Most Customers Rise in FY 1992

U.S. agricultural exports rose \$4.3 billion during the first 11 months of FY 1992, as the value of exports rose for virtually every commodity and customer. The value of U.S. agricultural exports rose 12 percent to \$39 billion during October 1991-August 1992, with cotton the only major commodity with lower exports and Eastern Europe the only export market taking significantly less.

Wheat Shipments Lead Export Surge

Exports to the republics of the former Soviet Union (FSU) rose more than \$1 billion in 1992, while exports to Mexico increased \$711 million and exports to Japan climbed \$510 million. U.S. gains were led by wheat (\$1.4 billion higher), animal products (\$827 million higher), and soybeans (\$710 million higher).

The jump in U.S. agricultural exports to the FSU reflected increased availability of credit and the FSU's greater need for imports. FSU demand for agricultural imports was heightened by the sharp drop in 1991 grain production and the breakup of the Soviet Union. Sales of U.S. agricultural products to the FSU were aided by increased credit guarantees through USDA's General Sales Manager (GSM) Program.

Grain production in the FSU fell in 1991/92 largely because of unfavorable weather. A contributing factor was the disruption caused by economywide problems, stemming from the breakup of the Union. Disruption in the flow of goods resulted in factories and farms not receiving necessary inputs, which further hurt production. Higher imports have been necessary during FY 1992 as lower grain production compounded the unwillingness of producers in the FSU to supply grain to the state.

Wheat achieved the largest gain by far in U.S. agricultural exports to the FSU. Wheat exports to the FSU rose \$826 million as volume increased 6.3 million tons, accounting

for most of the total gain in U.S. wheat exports. Increased exports to the FSU more than offset a 1.1-million-ton decline in shipments to Latin America. Larger shipments elsewhere included a 1.2-million-ton gain to South Asia (mostly Pakistan and Bangladesh), a 1.1-million-ton gain to China, and an 847,000-ton increase to Egypt.

Oilseed and Animal Product Exports Higher

U.S. exports of oilseeds and products to the FSU were higher as well, and accounted for 23 percent of the \$1.4-billion jump in oilseed and product sales to \$6.6 billion. Oilseed shipments to the EC-12 rose \$460 million, exceeding gains in shipments to either the FSU or Mexico. U.S. soybean and soybean meal shipments rose in FY 1992 despite lower EC demand. Reduced soybean supplies in South America provided opportunities for the United States to ship during periods when Brazil and Argentina normally dominate the EC market. U.S. oilseed and product exports also gained market share in East Asia, Southeast Asia, and the Middle East. Soybeans accounted for a large part of the increased exports, but soybean meal and vegetable oil exports rose as well. While U.S. soybean exports increased more than \$700 million in 1992, soybean meal exports rose \$300 million, and vegetable oil exports rose \$240 million.

U.S. exports of animal products rose \$856 million to a record \$7 billion during October 1991-August 1992. Exports rose for virtually every category of animal product and just about every customer. The only major exceptions were a \$95-million decline in cattle hides, and a \$21-million decline in shipments of all animal products to South Korea. South Korea is by far the largest U.S. market for cattle hides, so falling sales to Korea offset gains in beef, poultry meat, and tallow sales.

U.S. animal product sales gained most in Mexico (\$329 million), followed by Japan (\$215 million). Japan's gain was mostly due to larger meat shipments, while Mexico's was more dispersed among live animals, meat, and dairy products. Japan remained the largest market for U.S. animal products, with

Mexico rising to second place. Following 2 years of rapid growth, Mexico has become a larger market for U.S. animal products than the EC-12 or Other East Asia.

Cotton Exports Weaker

Cotton was the only major export commodity to decline this year. Export volume fell 6 percent to 1.4 million tons as record foreign production reduced the volume and the U.S. share of world trade. The largest cotton export loss came in shipments to the EC-12. Total EC consumption fell, and cotton was drawn from domestic inventories rather than through trade. Consumption and imports also fell in Japan and Korea, the two largest cotton customers of the United States.

Global cotton stocks rose faster than consumption in 1992, and cotton prices fell, reducing U.S. export earnings. After averaging \$1,665 per ton during the first 11 months of FY 1991, the average per-ton

value of U.S. cotton exported fell to \$1,466 during the same period in 1992. The value of U.S. cotton exports during October 1991-August 1992 fell \$400 million (17 percent) compared with a year earlier.

Eastern Europe was the only region to show a major decline among U.S. customers for all agricultural products. U.S. agricultural exports to Eastern Europe fell \$106 million to \$182 million. The drop in U.S. agricultural exports to the region was a result of a good 1991/92 harvest throughout much of the region, restructuring economies that are shifting demand patterns, and the lack of hard currency needed to buy U.S. products. U.S. Government credit guarantee and food aid programs helped alleviate the effect of the hard currency shortage for countries requesting aid, but the assistance was more than offset by factors tending to reduce trade. *(Stephen MacDonald, Commodity and Trade Analysis Branch, 202-219-0822)*

Table 1--Agricultural, nonagricultural, and total trade balance of exports and imports

Item	October-August		August

October-August Imports Ahead of Last Year

Agricultural imports during October 1991-August 1992 reached almost \$22.4 billion, 8 percent above last year's level. With a month remaining in the fiscal year, imports have nearly reached last year's record of \$22.6 billion. Noncompetitive agricultural imports were 7 percent above the same period last year. Bananas, cocoa, and coffee accounted for almost 70 percent of the \$5.3 billion in noncompetitive imports. Competitive imports were 8 percent higher than last year, and the strongest growth in import value was in unmanufactured tobacco, grains and feeds, and fruit juices.

Tobacco import value for the period (\$1.2 billion) was over 90 percent higher than in all of FY 1991 (\$698 million). Import value in July set a monthly record of \$492 million because duties on oriental tobacco, the largest class of imported tobacco, were removed under the Generalized System of Preferences (GSP) effective July 1, 1992. This change in tariff status resulted in a surge in imports for consumption as warehouses released bonded tobacco holdings. The primary beneficiaries of the tariff change were Bulgaria, Thailand, and Turkey.

Turkey accounts for about half of total U.S. unmanufactured tobacco imports.

Grain and feed imports continued to increase into the fourth quarter. The United States imported 1.1 million tons of Canadian wheat during October 1991-August 1992. Imports included durum wheat for pasta, and red spring and winter white wheat for baking products. Corn imports from Canada soared by over 700 percent. A bountiful crop and competitive prices pushed corn imports from Canada to 428,000 tons, compared with 53,000 tons last year.

Fruit juice import value increased by 21 percent, but imported volume was actually down 6 percent. The average import unit value for all fruit juice was almost \$34 per hectoliter, up 29 percent from a year ago. Orange juice imports continued to decline, down to 9.8 million hectoliters in FY 1992, but import value was up 17 percent. Grape and grapefruit juice imports, although a small portion of total juice imports, increased in both quantity and value. Imports of grape juice were up 72 percent to 1.4 million hectoliters, and grapefruit juice imports jumped 109 percent to 163,000 hectoliters. (*Joel Greene, Commodity and Trade Analysis Branch, 202-219-0822*)

Import Share of Consumption in 1990

The import share of consumption varies greatly depending on the type of commodity and U.S. domestic production levels. The import share of consumption for noncompetitive imports (tropical commodities not grown in the United States in any significant volume) such as bananas, coffee, or tea is at or near 100 percent. Other commodities such as dairy for which the U.S. industry easily supplied almost all consumption needs, showed a very small import share.

Methodology

Table 5 shows the import shares of consumption for selected commodities. The import share is calculated by dividing import quantities by food disappearance data available in USDA supply and utilization tables. In the supply and utilization tables, disappearance is treated as the residual and is the quantity available for food consumption. In some cases, import share is overstated because the amount of imports used outside the food system is not known. Some grain, for example, may be used for livestock feed, alcohol, or fuel. For rye and barley, the import shares exceed 100 percent because food use is far less than the quantity imported. Also, the data do not capture the amount of product ingredients, such as beef imported in frozen dinners or sugar imported in baked goods.

Commodities with Large Import Shares Increase

The import share of consumption for commodities can be greatly affected by domestic crop conditions, as was the case for citrus fruit juice, peanuts, and sugar in 1990. The import share of consumption for frozen citrus juice rose sharply in 1990 because winter freezes greatly reduced the domestic crop during the winter of 1989. In 1990, 57 percent of consumption was satisfied through imports, more than double the share of the previous year. The import share of peanut consumption also rose sharply in 1990, above 1 percent for the first time since 1980 when record amounts of peanuts were imported. Low domestic production and

supplies led to increased peanut imports in 1990. The import share of consumption of cane and beet sugar rose to 24.7 percent in 1990, as higher import quotas offset lower domestic production. Edible syrups and molasses reached their highest import share level ever at over 88 percent.

Horticultural Commodities

The United States imports a sizable portion of several fresh vegetables, primarily artichokes, asparagus, eggplant, garlic, and tomatoes. In 1990, import shares of asparagus and cauliflower increased the most, 21 percent and 18 percent, although fresh cauliflower imports were still a small portion of consumption. Artichoke and eggplant import shares each rose by about 5 percent, while garlic and tomato shares declined. A much larger share of broccoli and cauliflower used for processing was imported, primarily from Mexico. Frozen asparagus import share increased over 150 percent in 1990, but was still lower than levels in the early 1980's.

The import share of consumption for fruit rose 5 percent in 1990. The import share of both citrus fruits and apples, which make up almost half of the fruit consumed, increased over the previous year. The import share of citrus fruit doubled during 1980-90, but apple's share fell after the mid-1980's. The strongest growth in import share came in other fruits, of which grapes are the largest component.

Consumption of tree nuts continued growing in 1990 and import share rose 17 percent. Some of the largest growth in consumption has been in Brazil nuts and cashews, which the United States must import.

Grains and Meat

Grains and grain product imports continued upward in 1990. The import share for wheat and wheat flour increased sharply from 1980 to 1990 as purchases of Canadian wheat (used in pasta and bakery industries) jumped. Steady increases in the rice and pasta import shares during 1980-90 reflected changes in consumption patterns. Only small portions of

barley, oats, and rye are used for food. The import share of red meats increased 8 percent over 1989, with most of the gain in beef imports. The pork import share rose slightly, but increased domestic supplies dampened import demand after 1988. The

fish and shellfish share was unchanged: although the share of fresh and frozen product was up, the share of canned products dropped back to 1988 levels. (*Joel Greene, Commodity and Trade Analysis Branch, 202-219-0822*)

NA = Not available.

Data on import share of consumption is available for 1990 in the USDA publication, Food Consumption, Prices, and Expenditures, 1970-90, August 1992. However, the data in table 5 for vegetable oils and grapes were calculated from data published in the 1992 Situation and Outlook Yearbooks covering Oil Crops and Fruit and Tree Nuts.

1/ Excludes game fish consumption.

2/ Includes cultivated catfish.

3/ Excludes intermediate products such as mild-cured salmon and salted cod, haddock, hake, pollack, and cusk.

4/ Milk equivalent of all dairy products calculated on milkfat basis.

5/ Includes cheddar, Colby, washed curd, stirred curd, and Monterey Jack.

6/ Olive oil imports.

7/ Includes palm kernel oil, palm oil, and coconut oil.

8/ Includes almonds, Brazil nuts, cashews, chestnuts, filberts, Macadamias, pecans, pignolias, and walnuts.

9/ Includes apricots, avocados, cherries, cranberries, figs, grapes, nectarines, peaches, pears, pineapples, plums, prunes, strawberries, papayas, and miscellaneous fruits.

U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1991 stimulated another \$1.40 (an additional \$54.7 billion overall) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 860,000 full-time civilian jobs, including 545,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural export value remained practically unchanged in 1991 from 1990 levels (\$39.2 versus \$39.3 billion). Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 39 percent of its wheat, 45 percent of its rice, 30 percent of its soybeans, 22 percent of its corn, and 50 percent of its cotton in FY 1991 (October 1990-September 1991).

U.S. agricultural exports peaked in 1981 at \$43.3 billion after years of steady growth, but then declined 33 percent by 1986. In 1991, agricultural exports regained their 1980 current-dollar value levels. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Agricultural exports in 1991 required nearly 860,000 workers. Exports in 1981 generated \$106.3 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports generated \$94 billion in business activity in 1991: \$39.2 billion for exports and nearly \$55 billion for supporting activities. Thus, each dollar from agricultural exports produced a multiplier effect of more than 2. Net exports in 1991 contributed \$16.5 billion to the U.S. trade balance, the same level as in 1990.

Exports Generate New Business, Add Jobs

The United States exported \$39.2 billion of agricultural products in 1991. The value of

exported raw products was \$15.8 billion; processed commodities, \$14.3 billion; and transportation and trade services for raw and processed products, \$9.1 billion. The nearly \$55 billion in supporting activity included \$10.3 billion from the farm sector, \$4.9 billion from the food-processing sector, \$15 billion from other manufacturing sectors, \$6.9 billion from trade and transportation, and \$17.6 billion from other services. Nonfarm sectors of the economy received about 81 percent of the additional economic activity.

Of the 860,000 full-time civilian jobs related to agricultural exports, more than 314,000 U.S. farmworkers, 10 percent of the farm labor force, worked in the production of export commodities. In addition, 545,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 67,000 of these jobs were in food processing, 228,000 in trade and transportation, 91,000 in other manufacturing sectors, and 159,000 in other services.

Bulk Export Levels Continued Lower in 1991

A trend begun last year continued as bulk agricultural exports (grains, oilseeds, and cotton) accounted for less than half of the export mix. Nonbulk (fresh fruits and vegetables, semi-processed and high-value processed) products contributed the most value to the \$39.2 billion in agricultural exports in 1991. Higher value agricultural exports accounted for \$22.6 billion, or 58 percent of all direct exports.

Bulk exports have a smaller proportional effect on the nonfarm economy than processed exports. Direct bulk exports generated an additional \$17.9 billion of business activity while direct nonbulk exports generated an additional \$36.8 billion (\$1.08 additional output per dollar of bulk exports compared with \$1.40 for all agricultural exports and \$1.63 for higher value exports). The additional business activity attributable to bulk exports was distributed differently across economic sectors (4 percent to farming, 36 percent to

manufacturing, 47 percent to other services, and 13 percent to wholesale trade and transportation) than the additional business activity for higher value agricultural exports (26 percent to farming, 7 percent to manufacturing, 25 percent to other services, and 12 percent to wholesale trade and transportation). Of the 860,000 jobs related to U.S. agricultural exports, 520,000 (60 percent) supported nonbulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. The value of net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$16.5 billion in 1991 partially offset a \$99-billion deficit in nonfarm trade, leaving the U.S. trade balance in deficit by \$82 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$22.7 billion in agricultural commodities in 1991. Some \$5.6 billion of this total was spent on items such as bananas, coffee, and tea that did not compete directly with U.S. agriculture. The balance (\$17.1 billion) was spent on imports such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines that compete with U.S. products.

Noncompetitive farm product imports have been declining at an annual rate of about 6 percent since 1986. Competitive agricultural imports are moving in the opposite direction, growing annually by 4.1 percent. Only competitive imports were included in this analysis of the effects of imports on the economy.

Using an input-output (I/O) model, we estimate that the equivalent domestic output effect of the \$17.1 billion of competitive imports in 1991 was \$43.4 billion. That is, each dollar spent on imports would have spawned another \$1.53 in supporting goods and services if those imported items had been

produced domestically, an output multiplier of about 2.53.

Stimulating the U.S. Economy through Agricultural Trade

The economywide 1991 net business surplus for agricultural trade was an estimated \$44.9 billion, a result of \$93.9 billion of total output generated by farm exports minus \$49 billion stimulated by agricultural imports (including noncompetitive imports). Almost all of the positive trade balance or direct benefit came from bulk agricultural exports in 1991. The port value of other nonbulk agricultural exports and nonbulk imports just about offset each other (table 6).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$26.1 billion of output associated with agricultural exports more than offset the \$10.5 billion of farm output implicitly lost because of competitive agricultural imports. All manufacturing, including the food-processing sectors, gained \$15.8 billion in total output, about 65,000 jobs and \$4.4 billion in income.

Some industrial sectors were examined for their net gain or loss due to trade. In terms of income, employment, and output, trade benefited the meat- and grain-processing, sugar, fats- and oils-milling, and miscellaneous food sectors. Agricultural trade was not beneficial to domestic dairy plants, beverage and flavoring makers, and confectioners and bakers. The net effects offset each other for canners, freezers, and dehydrators.

The U.S. economy outside of farming and food processing directly accrued a net \$5.4 billion from agricultural trade and a net increase in output of \$28.4 billion after considering the output lost to competitive agricultural imports.

Nonfarm Sector Receives Most Income Effects

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Each dollar of agricultural

exports in 1991 generated \$2.40 in total (direct and supporting) economic activity but represented only \$1 in income to wage earners, profits, and taxes.¹ Thus, the \$39.2 billion of agricultural exports in 1991 generated \$93.9 billion of total economic activity but \$39.2 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The I/O analysis enables researchers to determine the income that would have been realized had imported commodities been produced in the United States. In 1991, 72 percent of total income generated by agricultural exports went to the nonfarm sector and 79 percent of total income generated by competitive imports went to the nonfarm sector. Nonfarm, nonfood sectors of the economy received 63 percent of income from agricultural exports and 61 percent of the income effects attributed to competitive imports. The distribution of the income remaining within the farm and food-processing sectors differed markedly. The farm sector received 28 percent of the total income from agricultural exports, while the food-processing sector received 9 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food-processing sectors, with the food-processing sector assuming about 18 percent of the loss and the farm sector about 21 percent, reflecting the greater importance of processed food products in the competitive import bill of goods.

¹ This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional spending, our estimates of the economywide influences of agricultural trade are conservative.

Recent Data Revisions

The analysis in this article differs substantially from that in earlier issues of Foreign Agricultural Trade of the United States (FATUS). The earlier articles were all based on trade balance outcomes obtained by analyzing the results of an ERS trade impact model derived from the U.S. Department of Commerce, Bureau of Economic Analysis (BEA), 1977 Input-Output Tables. This article, however, incorporates data and tables released by BEA, in its 1982 benchmark input-output accounts of the United States. Also, an adjustment was made to account for the change in labor productivity from the base year, 1982, to the present. This adjustment had the overall effect of lowering levels of employment or jobs created by exports compared with previous reports because productivity has increased significantly since 1982.

Table 6 shows 1990 results, the results that would have occurred with the revised model, and the 1991 results. The multipliers, that is, economic activity generated, reported here are smaller than some reported trade multipliers. The multipliers used here come from an "open" input-output model, which depicts the sales and purchases between all intermediate sectors of the economy, sales to final demand, and purchases of factor services from value-added components. The "open" model does not depict the additional personal consumption that may result. The "open" model multipliers are best used to describe what has happened, or how sectors were interrelated in a base period. The analysis does not include new economic activity or new spending from households.

In the FATUS articles published between 1985 and 1991, the export and import activity has already occurred. We use the I/O model to estimate the output, income, and employment from each sector necessary to support the amount of agricultural trade. These multipliers include both the direct (exports) and the indirect (supporting

economic activity from other sectors) effects of a final demand purchase. For example, a multiplier of 2.40 for all agricultural exports indicates that \$2.40 (\$1.40 plus the original dollar) of economic activity is generated per dollar of agricultural exports.

Most I/O analyses stop at this point. If the I/O analyst is asked to analyze new and permanent demands (like exports resulting from an expanded foreign market that can be expected to last), a broader multiplier may be appropriate. The "open" model multiplier identifies income and employment associated with a particular level of exports, but does not consider the additional activity that might be generated if the incomes from this additional employment were spent in the economy. These effects are captured by a "household endogenous" (or "closed") I/O model. Multipliers from these I/O models are larger. The "closed" I/O model moves both personal consumption expenditures from final

demand and household incomes from value-added sectors to a set of endogenous economic sectors. These multipliers then are said to include the direct, indirect, and induced (the additional activity generated from the new income spent in the economy) effects of a final demand purchase. For example, \$5.21 of economic activity (including household income) is generated per dollar of wheat exports.

A potential use of these multipliers might involve analyzing the Export Enhancement Program (EEP). If EEP expenditures expanded wheat exports by \$1 million, but half of this was met from current production and half from expanded wheat production, the expected effects upon economic activity would be $0.5 \times \$5.21 \times \1 million , or \$2.6 million. (*William Edmondson and Michelle Robinson, National Economy and History Branch, Agriculture and Rural Economy Division, 202-219-0785*)

Japanese and EC Investment in U.S. Agriculture Grow in 1980's

Japanese investment in U.S. farmland and agribusiness has grown to over \$3 billion, but these holdings represent less than 1 percent of total investment in U.S. agriculture. Japan ranks fourth among the foreign owners of U.S. agricultural land and agribusiness in terms of value. Investments have been made in cattle ranches and livestock slaughterhouses, citrus groves and other orchards, vineyards, bottled water companies, food processing and beverage companies, bakeries, fisheries, grain storage facilities, restaurants, convenience foodstores, and grocery stores. International agreements like the 1988 U.S.-Japan Beef and Citrus Understanding have liberalized Japanese imports, presenting both Japanese investors and American growers with opportunities to invest profitably in an expanding market.

The European Community

West European countries, especially the United Kingdom, are the principal source of foreign investment in U.S. agricultural land and agribusinesses. But, such investment amounts to less than 1 percent of the total value of U.S. agricultural land and about 10 percent of the total assets of the U.S. food and beverage industry. European Community (EC) companies had \$29.4 billion invested in these sectors by 1990. EC investors' landholdings were concentrated mainly in timber (3.25 million acres) and pastureland (1.52 million acres).

Where are Holdings Concentrated and Does the United States Benefit?

Foreign direct investment (10 percent or more in an enterprise, as defined by the U.S. Department of Commerce) in the United States is partially offset by U.S. investment abroad. Economic theory tells us that the host country benefits from foreign direct investment through increased employment and labor income. EC affiliates employ 120,000 persons in the U.S. food and kindred products industries and another 204,000 persons in retail foodstores and other retail trade. Only a small por-

tion of these jobs represent a gain in jobs since less than 10 percent of the EC investments involves new investment; most represent just a change in ownership. Japanese companies employ 10,000 persons in the food and beverage industry, 6,100 in textile products, 4,000 in wholesale trade, 24,000 in restaurants, and 3,600 in agriculture, forestry, and fisheries. These numbers represent less than 1 percent of the labor force in these sectors in 1989.

The late 1980's were an era of mergers and acquisitions both in the United States and abroad. Ownership in U.S. companies allowed European corporations easy access to the growing and relatively affluent U.S. market. Japanese investors were able to tailor production to suit a growing Japanese market for Western-type products like beef and prepared foods. Changes in business taxes, such as the repeal of the unitary tax system in nine States, including California, also opened up opportunities for expansion in the United States.

To Order These Reports...

The information presented here is excerpted from *The Japanese Presence in U.S. Agribusiness*, FAER-244, and *The European Community's Presence in U.S. Agribusiness*, FAER-245, both by H. Christine Bolling. The cost is \$8.00 each.

To order, dial 1-800-999-6779 (toll free in the United States and Canada) and ask for the reports by title.

Please add 10 percent shipping to domestic addresses; add 35 percent to foreign addresses (including Canada). Charge your purchase to your VISA or MasterCard. Or send a check or purchase order (made payable to ERS-NASS) to:
